M.I.A. KIT CONTENTS

| Quantity | Part # | Description |
|----------|--------|--------------------------|
| 1 | 808003 | M.I.A. PCB |
| 1 | 808100 | Control Panel Overlay |
| 1 | 808200 | Marquee Styrene |
| 2 | 808300 | Side Decals |
| 1 | 30304 | Red Joy Stick |
| 1 | 30305 | Blue Joy Stick |
| 2 | 30111 | White Button |
| 2 | 30112 | Blue Button |
| 4 | 30110 | Red Button |
| 8 | 30250 | Palnuts |
| 8 | 30202 | Switch Holders |
| 1 | 870400 | Manual |
| 1 | 40903 | Kit Harness |
| 1 | 40605 | FCC Cage |
| 1 | 40310 | Clear Plexiglass Marquee |

* * * IMPORTANT NOTICE * * *

The Japanese Amusement Machine Manufacturers Association (JAMMA) has introduced a new standard in video game P.C.B's. It was decided that all new products from any JAMMA member will use the same pin print-out on the edge connecter. The edge connector will have 56 pin outs, 28 per side.

Konami Inc. will offer a 56 to 36 pin adaptor P.C.B. available through your distributor. This new adaptor P.C.B. will enable the new 56 pin out to adapt to Konami's old standard 36 pin out.

PUTTING YOUR BEST GAME FORWARD

PREPARATION:

For best results, all old graphics should be removed completely from the cabinet. "Stick-on" graphics can be removed by using a hairdryer or hot air device. The heat from the dryer will loosen the adhesive, allowing you to easily peel them off — any adhesive residue can be cleaned off with acetone and a soft dry cloth. (DO NOT USE ACETONE ON SURFACES PAINTED WITH FLAT PAINT.)

TOOLS YOU NEED:

- 1. Foaming Aerosol (such as "Windex").
- 2. Soft Squeegee.
- 3. X-Acto Knife.

SIDE PANEL DECALS

- 1. Spray area of cabinet where Side Panel decals are to be applied with foaming aerosol or a mild soap solution.
- 2. Remove protective backing from decals.
- 3. Position decals into place.
- 4. With a soft squeegee, beginning from the center of the decal, slowly and evenly press out excess foam until you achieve a smooth finish.
- 5. Allow to set approximately 2 to 3 hours before handling. Maximum adherence is achieved in 48 to 72 hours.

6. Trim side decal to fit your cabinet.

CONTROL PANEL OVERLAY:

- 1. Refer to Recommended Control Panel Layout on page 1.
- 2. Drill any new holes needed.
- 3. Plug any holes that will not be used. (A permanent epoxy-filler works well for this step.)
- 4. Pre-position the overlay prior to removing the backing.
- 5. Slowly apply the overlay inch by inch on the control panel, removing the backing as you apply it.
- 6. Once it's in place, by using an X-Acto knife, cut around the button and joystick placements.

INSTRUCTION/BUTTON DECALS:

Apply the Player Instruction, Button and 1 Player/2 Player decals in their respective positions. Apply pressure liberally. Allow to set as long as possible before putting game on location.

NOTE: Maximum adherence is achieved in 48 to 72 hours.

MARQUEE

(WEAR PROTECTIVE GLASSES WHILE TRIMMING MARQUEE)

1/8" Acrylic Marquee should be cut to fit your game. DO NOT remove protective mask until this is done.

One way of cutting your Marquee is as follows: (Be sure to protect painted side of Marquee from any surface which may scratch or mar finish).

CUTTING WITH A KNIFE OR SCRIBER:

Acrylic sheet up to 3/16" thick may be cut by a method similar to that used for cutting window glass. Use a scriber of some kind — a scribing knife such as the one pictured, a metal scriber, an awl, or even a sturdy craft knife — to score the sheet. Draw the scriber several times (7 or 8 times for a 3/16" thick piece) along a straight edge held firmly in place. It is best not to remove the protective masking. Make the cuts carefully using firm, even pressure. For best results make each stroke cleanly off the edge of the sheet.

Then clamp the acrylic sheet or hold it rigidly under a straight edge with the scribe mark hanging just over the edge of a table. Protect your hands with a cloth, and apply a sharp downward pressure to the other side of the sheet. It will break along the scratch. Scrape the edges to smooth any sharp corners. This method is not recommended for long breaks or thick material.

Always draw the scribing knife along a straight edge.

Break sheet over edge of table after scribing.

P.C.B. CAGE INSTALLATION

Konami, Inc. now supplies a new style P.C.B. cage which is superior to old style cages because of ease of installation. The cage is made of a 32 point stem-stock which is fire retardant.

TO INSTALL THE CAGE:

- 1. Open cage bottom and secure to desired P.C.B. position.
- 2. Install printed circuit board inside cage using wood screws, screwed through the cage bottom into cabinet side.
- 3. Close the cage over printed circuit board and secure with latch on cage.

M.I.A. WIRING HARNESS

| WIRE COLOR KEY: | Solder Side ← | | | → Parts Side | |
|-----------------|------------------|----|----|------------------|--------------|
| BLACK | GND | Α, | 1 | GND . | BLACK |

(BASE COLOR/LINE COLOR)

M.I.A. TECHNICAL INFORMATION

M.I.A. requires horizontally mounted monitor. It also generates composite negative sync. If your monitor is composite positive sync, you will have to change to composite negative sync.

To alternate composite positive sync to composite negative sync, use 7404 IC or 74LS04 IC. The signal on the output pin from the P.C.B. is a combination of H-sync and V-sync.

NOTE: Please refer to Figure 2.

(+5V and GND should be taken out of the P.C. Board.)

POSITIVE COMPOSITE SYNC.

TROUBLE SHOOTING GUIDE

| PROBLEM: | POSSIBLE SOLUTION |
|---|---|
| No Screen or Constant Reset | Check +5V line at the P.C.B. Adjust if necessary. Make sure all socketed eproms and custom IC's are seated securely. Apply light pressure to secure. Check harness to be sure it is not on backwards. |
| No Sound | Check +12V line at the P.C.B. Make sure both speaker out wires are connected to the speakers. (DO NOT CONNECT A GROUND.) |
| Distorted Sound | 1). Replace cabinet speaker. |
| I/O Problem (coin 1 doesn't work or Joystick Up doesn't work, etc.) | Do not hook a coin counter to the coin 1 or coin 2 outputs. This will cause damage. Check your schematic for the 74LS253 IC that corresponds to your I/O problem. Check the appropriate pin with a scope or multimeter for a high output (5V), if output is low replace the 74LS253. |

CAUTION

DO NOT WIRE COIN COUNTERS TO THE COIN 1 OR COIN 2 OUTPUTS. THIS WILL CAUSE DAMAGE TO THE I/O MICROCHIP 74LS253. COIN COUNTERS CAN ONLY BE WIRED TO COIN COUNTER OUTPUTS.

DIP SWITCH SETTINGS

DIP SWITCH NO. 1 SETTINGS

1. COIN SWITCH NO. 1 SETTINGS

3. CHANGE OF MODE

| SW | 3 | MODE |
|----|-----|------|
| 0 | OFF | GAME |
| | ON | TEST |

SW4 is not used.

O shows recommended settings.

MONITOR INFORMATION

SERVICE INSTRUCTIONS

NOTE: All monitors are equipped with automatic degaussing coils (L701) which demagnetize the picture tube every time the monitor is turned on after being off for a minimum of 5 minutes. Should any part of the chassis become magnetized it will be necessary to degauss the affected area with a manual degaussing coil. Move the coil slowly around the CRT face and all surrounding metal parts. Then slowly withdraw for a distance of 6 feet before turning off.

1.0 BLACK LEVEL CONTROL ADJUSTMENT

This control has been set at the factory and should not need further attention, however, when the game is connected a slight adjustment of VR201 may be necessary to obtain the proper black level (the black portion of the picture just extinguished).

2.0 VERTICAL SIZE (HEIGHT)

Location of this control is shown in Fig. 1. This control must be adjusted slowly, if necessary, until the picture or test pattern attains the correct vertical proportions.

3.0 CIRCUIT PROTECTION

A 4.0A pigtail fuse, mounted on the Main Board has been provided to protect the Power Output Circuit.

4.0 FOCUS

Adjust the focus control, located on the HV unit (T352), for maximum over-all definition and fine picture detail.

5.0 HORIZONTAL HOLD CONTROL ADJUSTMENT, VR351 (See Fig. 1)

A warm-up period of at least five minutes should be allowed before alignment is carried out. With the monitor being driven from the game signal, short TP601 to TP31. Adjust VR351 until the picture stops sliding horizontally. Remove the short.

6.0 HORIZONTAL VIDEO POSITION

If the video is off center on the raster some compensation can be made by adjusting this control.

7.0 VERTICAL RASTER POSITION ADJUSTMENT

If the video is off center vertically, (short dimension of picture tube) some compensation can be made by moving the vertical raster position adjustment jumper to either positions "U" or "D".

8.0 HORIZONTAL RASTER POSITION ADJUSTMENT

If the video is off center horizontally (long dimension of the picture tube) some compensation can be made by moving the horizontal raster position adjustment jumper to either positions "R" or "L".

9.0 HORIZONTAL WIDTH ADJUSTMENT

The horizontal width coil is a hexagonal tuning tool adjustment. This control must be adjusted slowly, if necessary, until the picture or test pattern attains the correct horizontal proportions.

* KONAMI GAMES ARE ALL NEGATIVE COMPOSIT SYNC. USE THE THREE PIN CONNECTOR ON THE MONITOR.
