Introduction

The Amiga CD[32] is a 32-bit system designed to play CD games and audio discs. Planned expansion options include a full motion video module and computer expansion unit.

Amiga CD[32] System Specifications

- Motorola® 68EC020, 32-bit microprocessor 14 mHz clock speed

- 2 MB, 32-bit Chip RAM

- 1 MB system ROM containing AmigaDOS

- Top loading CD-ROM double-speed drive

- Advanced Graphics Architecture™ custom chip set support for:

  256,000 screen colors from a palette of 16.8 million colors
  Resolutions up to 800 x 600
  Eight 64-bit sprites
  Two graphics accelerator co-processors

- Video display support for:

  S-video for TV
  PAL and NTSC composite video monitor or TV
  PAL and NTSC RF modulator output for TV

- Audio support for:

  Four channel stereo sound
  8-bit digital/analog converters
  16-bit audio CD stereo at 44 kHz
  Headphone jack
  Sliding volume control

- Interfaces include:

  Eleven switch game controller (included with system)
  Two game controller/joystick/mouse ports
  High speed auxiliary connector for serial devices
  182-pin expansion connector for Amiga computer module and Amiga CD^{32} full motion video module

- External brick-type 22 watt power supply

- Supported CD types include Amiga CD^{32}, Audio CD, CD+G and CDTV™

- System dimensions—21.2 cm deep x 31.1 cm wide x 8.1 cm high

- System unit weight—1.44 kg

- Power supply weight—1.53 kg

Using This Guide

You'll find instructions similar to those the user receives for connecting and operation the system in Chapter 1. The additional chapters provide instructions for upgrading and repairing the Amiga CD^{32} system.

Chapter 1, Customer Information, provides instructions for connecting and operating the system.

Chapter 2, Replacing the Field Replaceable Units (FRUs), gives you instructions on how to remove and replace field replaceable sub-assemblies.

Chapter 3, Installing ROM Upgrade, tells you how to remove and install the ROM on the motherboard.

Chapter 4, Amiga CD^{32} System Specifications, provides technical details about the system including a memory map, block diagrams, pinouts, and ASIC specifications.

Chapter 5, Bill of Materials (BOM), gives the part numbers for items on the BOM and highlights the part numbers for the FRUs.

Chapter 6, Schematics, provides PCB assembly schematics.

Chapter 1
Customer Information

This chapter summarizes the information the customer receives. This includes basic setup instructions and software operations. The Amiga CD^{32} system comes with the items illustrated in Figure 1-1.
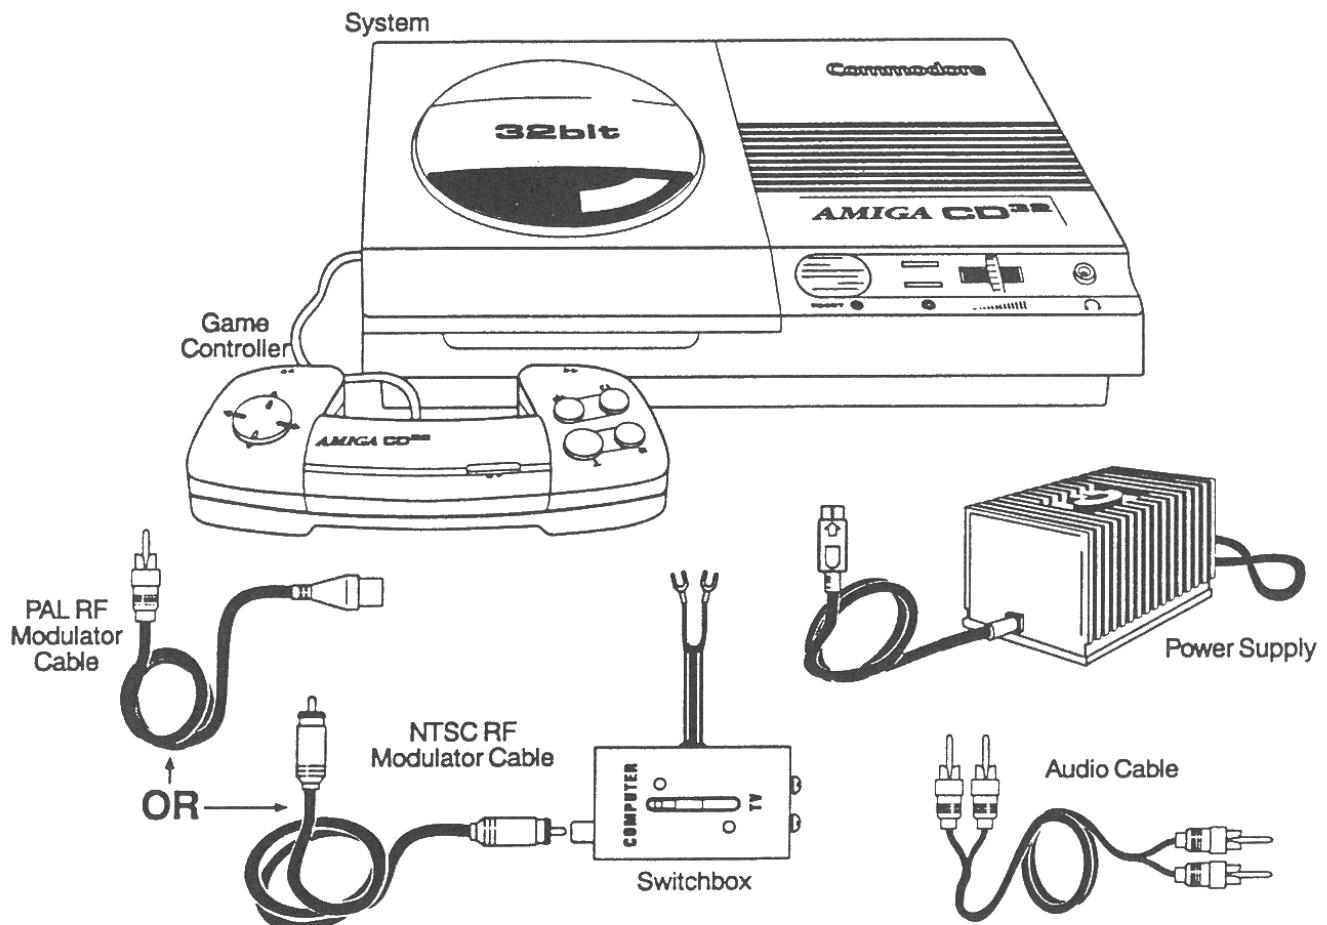

Figure 1-1. Amiga CD^{32} System

Connecting a Television/Monitor

The easiest way to connect the Amiga CD^{32} system to a television/monitor is to use the RF modulator that provides all the video and audio connections necessary. For a PAL system: Use the provided RF modulator cable. For a NTSC system use the provided RF switch box to connect a television/monitor with a VHF cable (F-type) connector and 75Ω antenna, cable or VCR cable. The NTSC system requires a 300/75Ω converter for an antenna or rabbit ears with twin lead wire and a 75/300Ω converter for VHF screw type connectors.

S-video and composite video are options, but require the customer to purchase additional specialized cables. The customer is referred to his TV documents in order to determine whether his set is S-video or composite video compatible.

The stereo audio cables allow the customer to connect to TV stereo, powered speakers, or standard stereo output.

See Figure 1-2 for the location of the side and rear panel features.
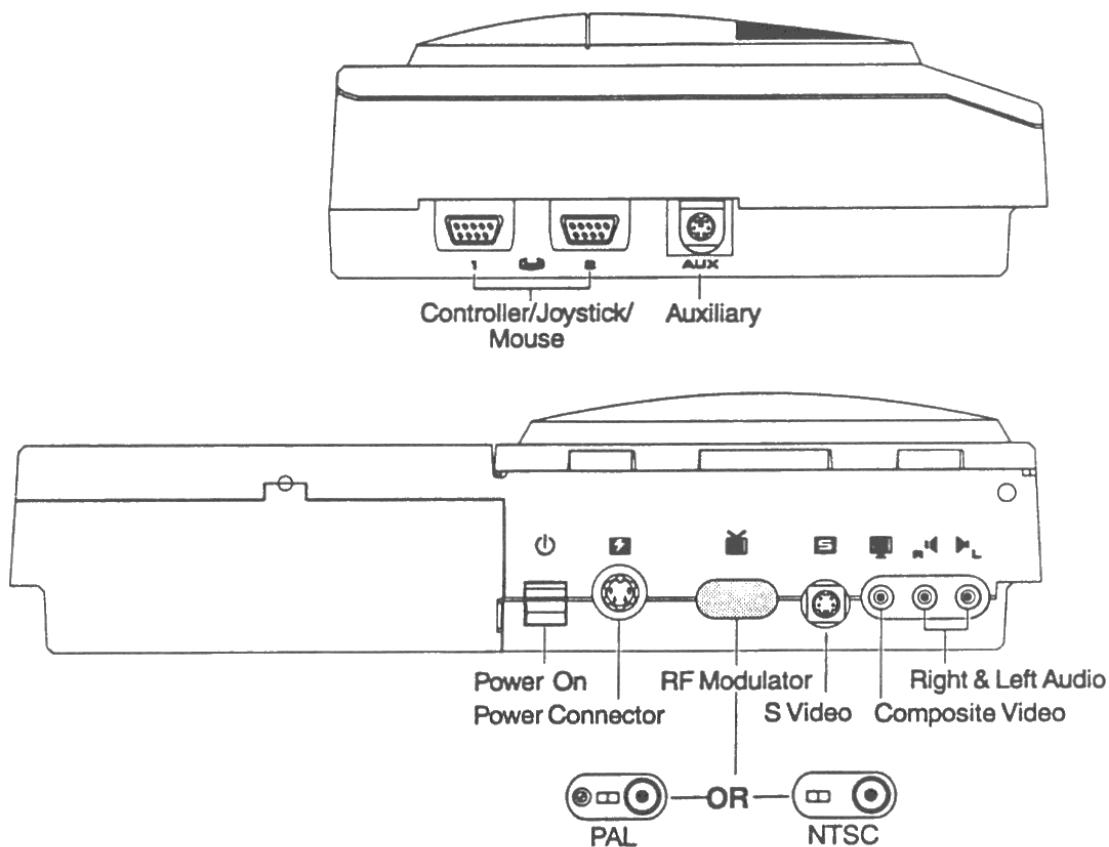

Figure 1-2. Side and Rear Panels

Table 1-1 lists each socket on the system unit side and rear panels and summarizes the information provided to the customer.

Table 1-1. Side and Rear Panel Connectors

| Connector	Description
Game Controller Connector	Plug the game controller into socket 1. To use a second game controller, joystick or mouse, plug it into socket 2. Don't plug or unplug a controller while the power is on.
Auxiliary Connector	To use keyboard or another device, plug it into the socket marked AUX.
RF Connector	Plug the RF modulator cable into the jack and the other end into the television/monitor.
	For a PAL system:
	Set the switch to the left (5.5 mHz) for the United Kingdom and to the right (6.0 mHz) for all other countries.
	If the television/monitor picture is not clear, use a small flat-bladed screwdriver to turn the screw until the picture is in sharp focus.
	For a NTSC system:
	Set the switch to left for channel 3 and or the right for channel 4, whichever is not used in your geographical area.
	For both systems use the television/monitor volume control to adjust the sound.
S-video Connector	To use S-video, the customer must buy an S-video cable with a 4-pin mini-DIN connector at each end. Plug one end of the cable into the socket under the symbol and the other into the television/monitor.
Composite Video Connector	To use composite video, the customer must buy a composite video cable with an RCA plug at each end. Plug one end of the cable into the yellow socket and the other into the television/monitor.
Right and Left Audio Connectors	If the customer has a stereo television/monitor, he can use the stereo audio cables shipped with the system. Plug the white cable into the white socket and the other cable into the red socket. Connect the other end to the television/monitor.
	If the customer wants to connect a television/monitor with mono sound, he should plug the white cable into the white socket under the symbol. Do not connect the other cable. Plug the white cable on the other end into the television/monitor.

Plug in the power supply and turn on the system only after securely connecting these options. In the United Kingdom manual, the customer is told to have a certified electrician attach the correct plug to the cable.

The control panel in the front of the machine contains the reset button, power and disk activity lights, headset jack and headset volume control.

The Game Controller

The system comes with a customized game controller that has four play buttons, a pause/start bar, two general feature bars and an omni-directional movement button. The controller is used for controlling game play, making audio selections and defining system set-up options..

Using the Amiga CD³² Software

Once the system has been turned on, you can change CDs by just lifting the lid and the disc stops spinning. The system starts again when you close the lid.

•   If you put an Amiga CD³² game in the drive the logo screen appears for a few seconds while the game loads. Then the game starts.

•   If you put an audio CD in the drive you'll see the audio control display.

•   If there is no CD in the drive you'll see the Amiga CD³² logo screen.

Playing Audio CDs

The user can play an audio CD in one of two ways: from the controller or from the audio display. The easiest way is to press the appropriate button on the controller. The function symbols associated with the buttons are identical to those on the display. The other way is to highlight the appropriate box on the display and press the red button to select it. Use the black directional button to move the highlight around the display.

Selecting a Language

From the logo screen press the blue button to see the language selection screen. Choose a preferred language for game playing on this screen. This is a one time selection.

Locking Game Information

From the logo screen press the red button to see the gamelock screen. The Amiga CD³² can save 100 memory units worth of game information. This screen allows the user to protect old game information from being deleted or replaced by other game information by "locking" it.

Chapter 2
Replacing Field Replaceable Units (FRUs)

This chapter gives instructions for removing and replacing the following FRUs:

- Power supply (part number 313375-01 to 313375-06)
- Game controller (part number 365183-01
- System motherboard (part number 365101-02 PAL or 365101-01 NTSC)
- Bottom Case Assembly (part number 365159-01, see Chapter 5 for individual part numbers)
- CD drive cable (part number 313376-01)
- CD drive assembly (part number 365161-01
- LED cable (part number 365367-01)
- LED board assembly (part number 365168-01)
- Top Case Assembly (part number 365160-01, see Chapter 5 for individual part numbers)

Order replacements according to the procedures established by your service organization.

Replacing the Power Supply and Game Controller
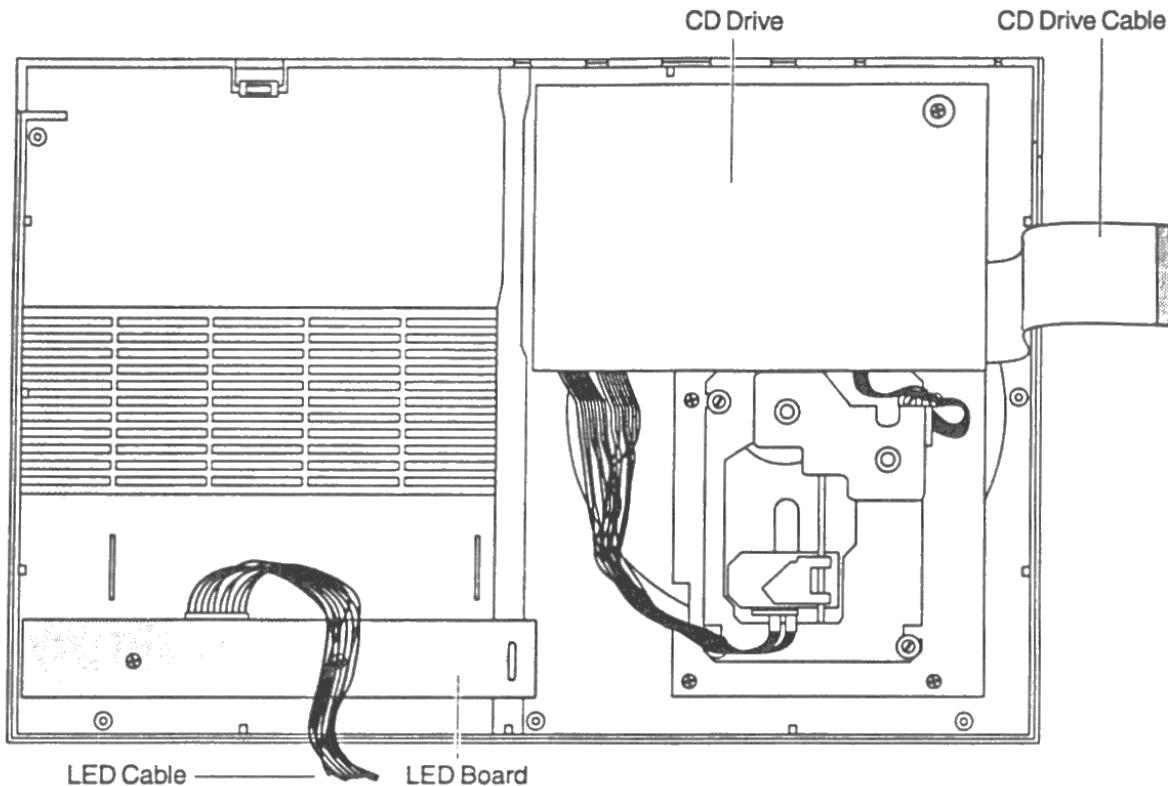

If the power supply or game controller is defective replace it with a new item.

Separating and Connecting the System Top and Bottom Cases

To remove the system top case:
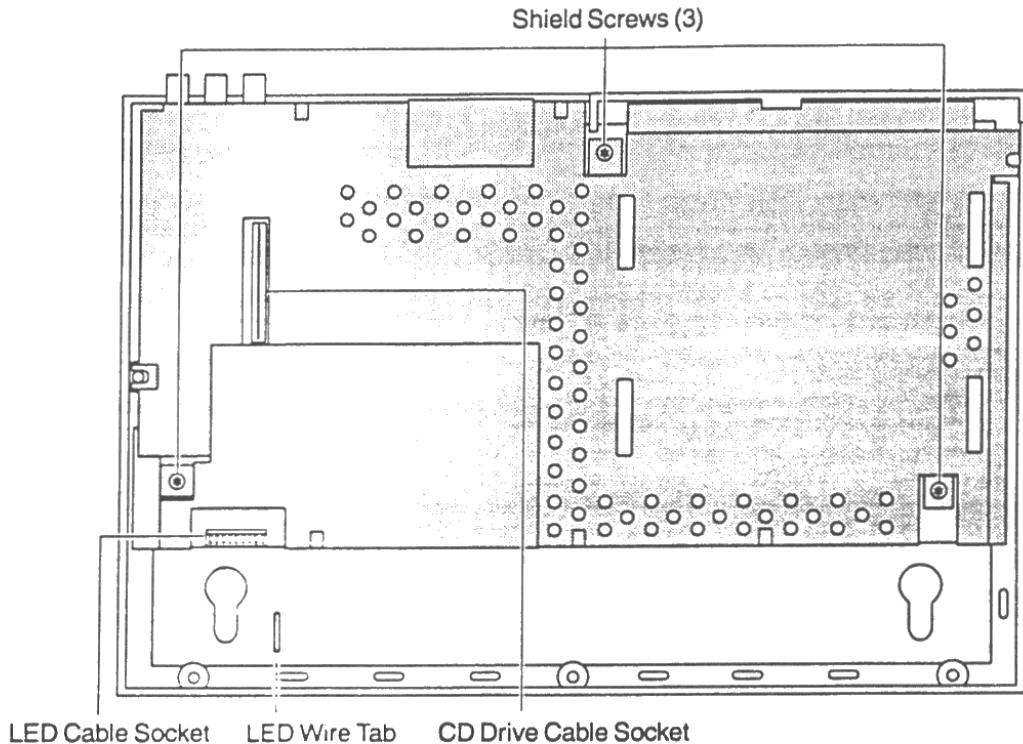

1. Turn off the power switch and remove all connecting cables.

2. Remove the system case screws. Remove the case screw on the rear panel as illustrated in Figure 1-2. Turn the system over and remove the five screws on the bottom of the case.

3. Turn the system over while holding the system bottom case firmly to the system top case.

4. The CD drive assembly and LED board are connected to the top case and their cables attach to the motherboard in the bottom case. Very carefully lift up the top case from the bottom case a few inches.

5. Remove the LED board cable from the LED board installed in the top system case. Locate the LED board cable in Figure 2-1. Grasp the connector by the outside edges. Pull it out of the socket and lift the cable out of the niche behind the tab in the bottom of the system case. Make certain to place the cable behind the tab on the bottom of the system case when replugging it into the LED board.

Figure 2-1. CD Player and LED Board Location and Cables

6. Flip the top case up at a 90° angle to expose the inside of the top and bottom cases.

7. Remove the LED board cable from the motherboard. Locate the LED board cable socket on the bottom of the case in Figure 2-2. Make certain to place the cable behind the tab on the bottom of the system case when replugging it into the motherboard.

Shield Screws (3)

LED Cable Socket   LED Wire Tab   CD Drive Cable Socket

Figure 2-2. Motherboard Shield and Cable Socket Locations

8. Remove the CD drive cable from the motherboard. Locate the CD drive cable socket on the motherboard in Figure 2-2. The socket may be an insertion socket or a ZIF socket. Grasp the cable firmly and pull it out of the socket. To insert the cable into an insertion socket, grasp the flat ribbon cable and push it straight into the socket. To insert the cable into a ZIF socket, first grasp the socket on its outside edges with a needle-nose pliers and pull the socket up to release it. Then grasp the flat ribbon cable and push it straight into the socket. Push the socket down to lock the cable in place.

9. Reverse this procedure to reassemble the top and bottom cases.

Replacing the Motherboard

Follow the instructions for removing the system top case on page 2-1.

To remove and replace the motherboard:

1. Locate the three shield screws on Figure 2-2 and remove the screws.

2. Lift the shield out of the case.

3. Bend the shield tabs to a 90° angle and remove the top shield.

4. Lift the motherboard out of the bottom shield and replace it.

5. Reverse the preceding steps to reassemble the case.

Replacing the Bottom Case

Follow the instructions for removing the system top case on page 2-1.

To replace the bottom case:

1. Remove the shield containing the mother board by following steps 1 and 2 under "Replacing the Motherboard" page 2-3.

2. Replace the shield and motherboard in a new case.

3. Reverse the preceding steps to reassemble the case.

Replacing the CD Drive

Follow the instructions for removing the system top case on page 2-1.

To remove and replace the CD drive:

1. Locate the five CD drive screws on Figure 2-1 and remove the screws.

2. Lift the CD drive out of the top case and replace it.

3. Reverse the preceding steps to reassemble the case.

Replacing the CD Drive Cable

Follow the instructions for removing the system top case on page 2-1.

Follow the instructions for removing the CD Drive on page 2-4.

To remove and replace the CD Drive cable.

1. Locate the CD drive cable on the drive in Figure 2-2. Grasp the flat ribbon cable on the outside edges near the socket and pull it straight out of the socket. To insert the cable, grasp the flat ribbon cable on the outside edges near the socket and push it straight out of the socket. Make certain that the cable is firmly seated in the socket.

2. Reverse this procedure to reassemble the top and bottom cases.

Replacing the LED Board

Follow the instructions for removing the system top case on page 2-1.

1. Locate the two LED board screws on Figure 2-2 and remove the screws.

2. Lift the LED board out of the top case and replace it.

3. Reverse the preceding steps to reassemble the case.

Replacing the LED Board Cable

Follow the instructions for removing the system top case on page 2-1.

To remove and replace the LED board cable connected to the LED board:

1. Grasp the connector by the outside edges and pull it straight up and out of the socket.

2. Reverse the preceding steps to replace the cable.

Replacing the Hinge and Case Top Lid

To remove and replace the case top lid:

1. Locate the hinge pin screw illustrated in Figure 2-3 and remove the screw.
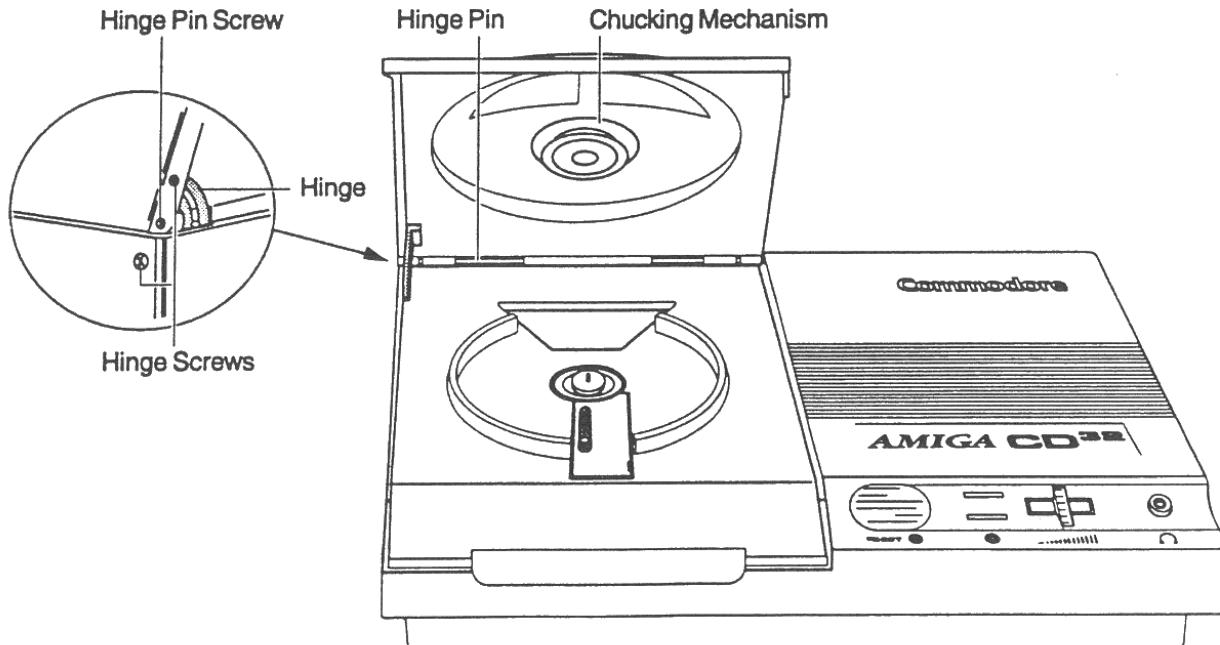

Figure 2-3. Hinge and Case Lid

2. Remove the hinge pin. If necessary, use a needle-nose pliers to work the hinge pin out of the hinge.

3. Locate the two hinge screws illustrated in Figure 2-3 and remove the screws.

4. Remove the hinge.

5. Replace the lid with the attached chucking mechanism.

6. Reverse the preceding steps to reassemble the case top lid.

Chapter 3
Installing ROM Upgrade

A ROM chip upgrade can enhance the functionality of the Amiga CD^{32} system.

Before You Begin
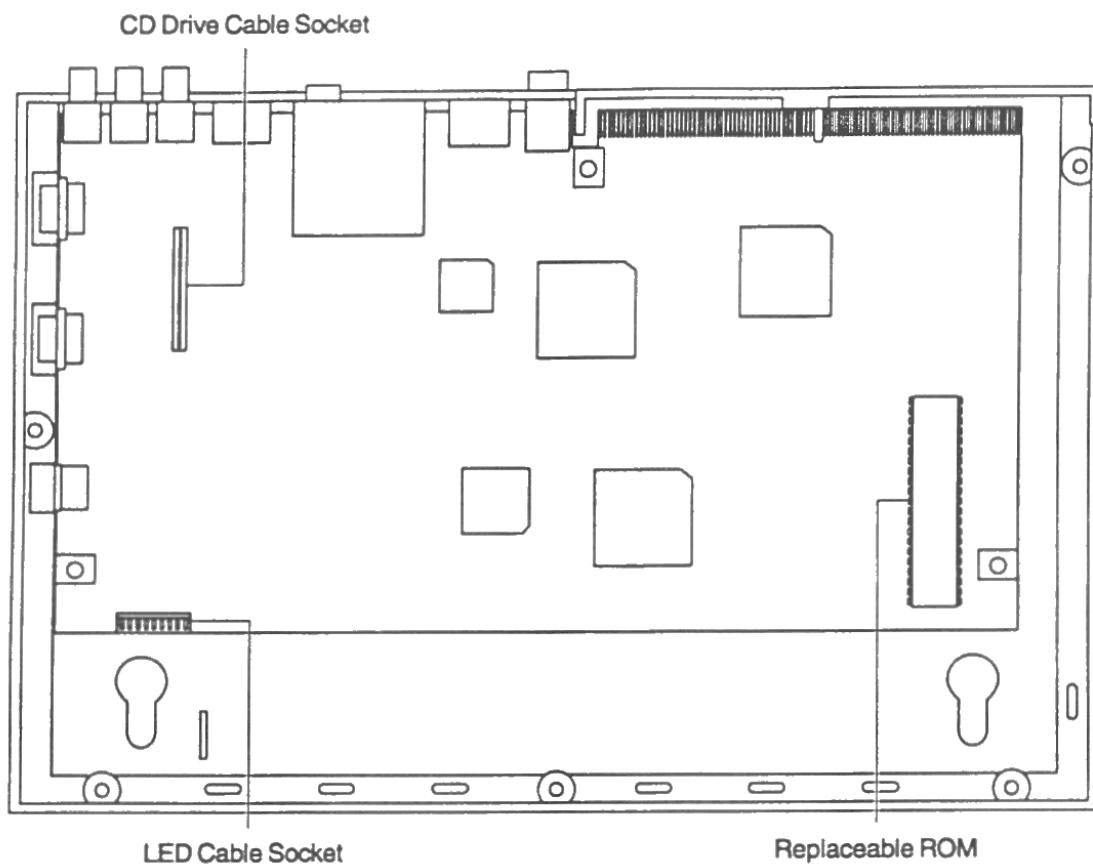

When removing and replacing the ROM chip:

- Turn off the power on your system.
- Disconnect all external cables from your system unit.
- Remove the system unit cover, as explained in Chapter 2.
- Remove the motherboard from the shield case, as explained in Chapter 2.
- Follow the instructions in this chapter to install ROM upgrade option.

Installing the ROM Upgrade

When replacing the ROM chip:

1. Locate the chip on the motherboard, as illustrated in Figure 3-1.

CD Drive Cable Socket

LED Cable Socket   Replaceable ROM

Figure 3-1. ROM Chip Location

2. Remove the ROM chip using a chip pulling tool.

3. Locate the U notch on the end of the ROM socket, as illustrated in Figure 3-1.

4. Locate the U notch on the end of the new ROM chip. Orient the chip above the socket.

5. Align the legs on the chip with the holes in the socket.

6. Insert the chip in the socket. Press firmly, but do not force.

7. Reassemble the system by reversing the steps on page 3-1.

Chapter 4
System Specifications

The Amiga CD^{32} is an entry level, 32-bit CD game machine based on a 68EC020 microprocessor and the AGA (Advanced Graphics Architecture) chip set also known as AA (pronounced "double A"). Basically the system is a cost reduced CDTV with a top loading CD-ROM drive based on a streamlined A1200 motherboard.

The Amiga CD^{32} introduces a new gate array, Akiko, that acts as an interface:

- Between the processor and the custom chips

- For talking to a CD drive

- For accelerating Chunky to Planar pixel conversion

An optional expansion box converts the Amiga CD^{32} into a complete Amiga computer with a floppy disk drive, standard interface connectors, expansion slot space for a hard disk and Fast RAM upgrades.

The optional Amiga CD^{32} Full Motion Video module provides over seventy minutes of TV-quality video.

This chapter provides technical details about the Amiga CD^{32} system including:

- Block diagram
- System memory map
- Pinouts
- Akiko specification

System Block Diagram

Refer to Figure 4-1 for the Amiga CD^{32} system block diagram.
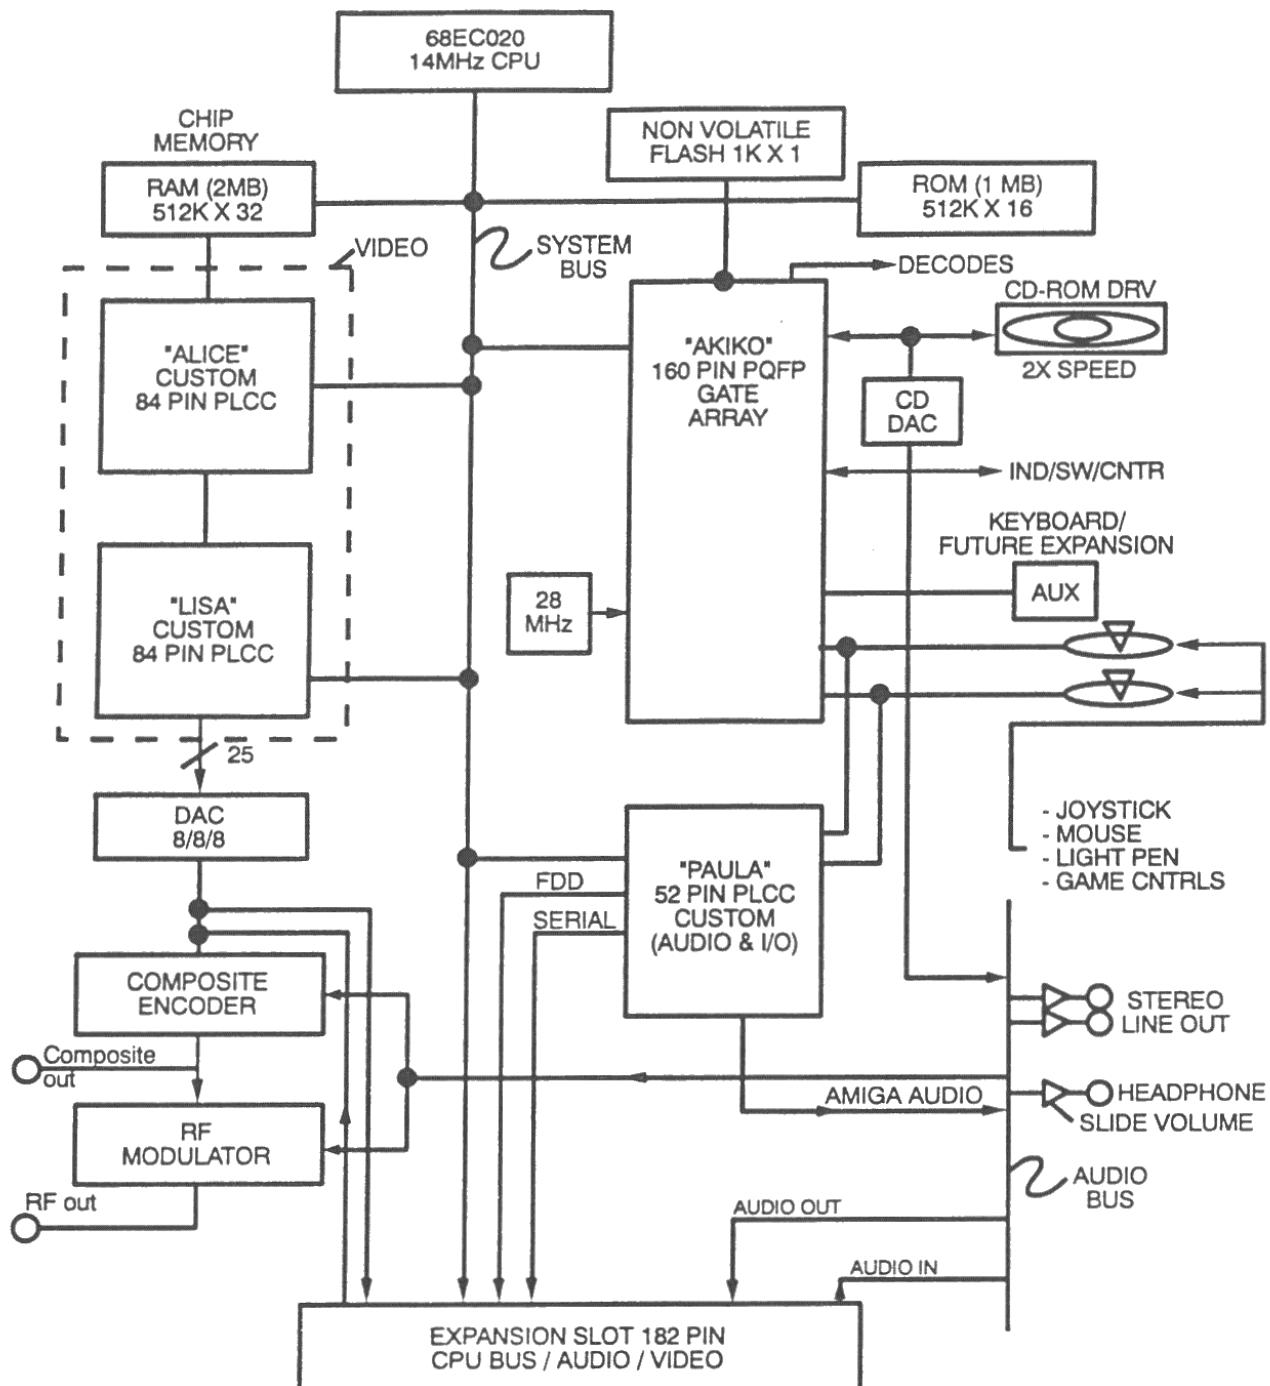

Figure 4-1. Amiga CD^{32} Block Diagram

Akiko Specification

Akiko functions as the main control gate array for the Amiga CD^{32} Game System (CDGS). It acts as an interface between the processor and the custom chips buffering the data and generating the control signals. It also contains an interface for talking to a CD drive mechanism and a corner turn memory for accelerating Chunky to Planar pixel conversion. This device occupies position U5 in the CD game system.

Configuration

This device is configured as a 160-pin plastic quad flat pack (PQFP) package, with external dimensions as shown in Figure 4-2.

PHYSICAL REQUIREMENTS

Marking

The parts are marked with Manufacturer's Part Number, Manufacturer's Identification, and EIA Date Code.

Packaging

A 160-pin PQFP plastic package with exterior dimensions illustrated in Figure 4-2 contains the interconnected logic circuitry.

Minimum Acceptance Level

The minimum acceptance level of any lot is an AQL of 0.65 as defined by MIL-STD 105 single sampling techniques.

Age Of Devices

Reject any unit with a EIA Date Code indicating an age of three (3) or more years.

Chapter 5
Bill of Materials

The following information is taken from the Amiga CD^{32} Bill of Materials (BOM).

* Title of the drawing
* Number and revision level of the drawing
* Part number of each part
* Description of each part
* Reference description/notes for each part

The BOM contains additional product configuration data not reproduced in this table. The BOM is updated periodically. For a complete current listing of all the information contained in a BOM (including line item numbers), request the latest revision BOM drawings (by drawing number) from Engineering Documentation in West Chester.

313371-05	Modulator, MDG-UD3626	(X2)
904500-02	Switch, Rocker, DPDT, R-Ang, PC-MT	SW1; Substitute for PN 252182-01

Main Assembly/CDGS Player (365158 Rev C)

365158-01	Main Assembly: PAL/CDGS Player	
365158-02	Main Assembly: NTSC/CDGS Player	
365160-01	Top Assembly/CDGS Player	
365159-01	Bottom Assembly: PAL/CDGS Player	
365159-02	Bottom Assembly: NTSC/CDGS Player	
390146-01	Screw, Torx Drive, Hi-Lo Flute, M3 x 8.0 LG	
390177-02	Screw, Torx Drive, Tri-Lobe	Substitute for PN 390146-01
369651-01	Label, Laser Caution	
906810-19	Screw, Machine, M4 x 0.7 x 12.0 LG	
365306-01	Nut, Speed, 'U' Type, M4 x 0.7	

Bottom Assembly: CDGS Player (365159 Rev B)

365159-01	Bottom Assembly: PAL/CDGS Player
365159-02	Bottom Assembly: NTSC/CDGS Player
365101-02	PCB Assembly: PAL/CDGS Player
365101-01	PCB Assembly: NTSC/CDGS Player
365167-01	Shield, Top
365166-01	Shield, Bottom
365216-01	Insulation Sheet
313376-03	Cable, Flexible Flat
365195-01	Bottom Case
310080-02	Foot, Rubber, Black

Bottom Assembly: CDGS Player (365159 Rev B)   (cont'd)

369652-01	Label, Laser Date	
369630-02	Rating Label/VDE	Made in Phillipines
369630-01	Rating Label/FCC	Made in Phillipines
369630-01	Rating Label/Brazil	Used for Brazil only
390146-01	Screw, Torx Drive, Blunt Pnt, ST, Hi-Lo Flute	
390177-01	Screw, Torx Drive, Tri-Lobe	Substitute for PN 390146-01
365367-01	Cable, LED	
365367-02	Cable, LED with Torroid (1 turn)	
365193-01	Cover, Expansion	

Top Assembly/CDGS Player (365160 Rev A)

365160-01	Top Assembly/CDGS Player	
365161-01	CD ROM Drive Assembly	
365169-01	Lid Assembly	
365172-01	Hinge Mechanism Assembly	
365171-01	Hinge Pin	
365196-01	Top Case	
365168-01	LED PCB Assembly CDGS/P	
365219-01	Button, Reset	
365218-01	Button, Volume	
365282-01	Spring	Use with PN 365219-01
365301-01	Nameplate, CDGS (Amiga CD32)	
365012-03	Screw, Flat Head, Mach., M2 x 6.0 LG	Hinge Mechanism (Black)
390146-01	Screw, Torx T-10 Drive, M3 x 8.0mm, PH	LED PCB Assy/Drive Mech.
906921-03	Screw, Flat Head, Self Tap., M2.5 x 4.0 LG	(Black) for PN 365171-01
906803-07	Screw, Flat Head, Mach., M3 x 5 LG	(Black)
390177-02	Screw, Torx Drive, Tri-Lobe	Substitute for PN 390146-01
390177-01	Screw, Torx Drive, Tri-Lobe	Substitute for PN 390146-01
365366-01	Lubricant, Lithium	For PN 365172-01, Hinge Mechanism

CD ROM Drive Assembly/CDGS Player (365161 Rev A)

365161-01	CD ROM Drive Assembly
365181-01	CD ROM Mechanism
365194-01	Mounting Plate
365180-01	Insulator- "K" Type

CD ROM Drive Assembly/CDGS Player (365161 Rev A)   (cont'd)

365179-01	U-Spring, Front, (Silver, Light)	Spring 'B'
365178-01	U-Spring, Rear, (Gold, Heavy)	Spring 'A,' Motor Side
365177-01	Controller PCB Assembly	
365176-01	Cable, Head Mechanism	
365176-02	Cable, Head Mechanism	
365175-01	Cable, Drive	
365174-01	Spindle/Lens Cover	
365173-01	Shield, Controller PCB	
365197-01	Screw, Shoulder	Used with PN 365180-01, 365179-01, 365178-01
365224-01	Standoff, Hex, Female/Male, M3 x 11	
365236-01	Screw, Pan HD, Self Tap, M2 x 5 LG AB	For mounting PN 365174-01
390146-04	Torx T-10 Drive M3 x 5mm, PH	For mounting PN 365177-01, 365173-01, 905655-03 and 365223-01
905655-03	Washer, External Tooth Lock, M3	
365223-01	Insulation Sheet	
390177-04	Screw, Torx Drive, Tri-Lobe	Substitute for PN 390146-04

Disk Chucking Assembly/CDGS Player (365163 Rev A)

365163-01	Disk Chucking Assembly
365191-01	Magnet
365190-01	Chucking Plate "A"
365189-01	Washer 80 x 45 x .5
365188-01	Chucking Plate "B"
365230-01	Screw, M2 x 3.0, Mach.

PCBA, CDGS, LED/Audio (365168 Rev B)
